

ITC Holdings proudly supports the bipartisan SPEED Act, introduced by Chairman Bruce Westerman and Rep. Jared Golden. This legislation streamlines NEPA and judicial review processes while safeguarding environmental and public input protections. As the nation's largest independent electric transmission company, we've seen firsthand how permitting delays—like the 13-year timeline for one recent project—can hinder progress. With new initiatives underway to cut energy costs, boost reliability, and drive economic growth, reform is urgent. We look forward to working with Congress to advance this critical legislation.

— Krista Tanner, President, ITC Holdings Corporation
